

For AutoCAD® Users

We have created an AutoCAD® block library of over 900 pieces encompassing all of our Kravet, Lee Jofa, Holland & Co, and MacRae furniture lines. These blocks were created in AutoCAD® 2007 and are compatible with all versions of AutoCAD® from 2007 forward. The blocks are drawn to scale and each has the name and number of the furniture piece included in the block for easy reference.

To use, simply download the file onto your computer. Once you have the file on your computer there are two ways to use the library. The first is to copy and paste the furniture selections you would like to use into your drawing.

The second way to use the library is to insert it into your drawing using your insert block command. This will bring the entire block library into your drawing.

We have created each library so that all blocks are visible when opened. If you prefer to insert the drawing blank, erase all blocks on the screen and save, prior to inserting. Once inserted, all blocks will appear only in your pull down block menu.

These blocks are created for AutoCAD® for use on a PC or PC for Mac.

We hope that this library becomes a valuable tool for your business. Thank you for using Kravet and Lee Jofa.

Disclaimer: Although these blocks are drawn to scale, we cannot be responsible for issues arising from their use, as they can be manipulated. It is the user's responsibility to confirm all dimensions.
